Protocol for asymptomatic CSF1R mutation carrier

The first step after receiving your positive CSF1R mutation is to contact Sister's Hope Foundation. They will help connect you to a neurologist that has experience with ALSP. This neurologist will work with a local neurologist, which they will help you find, to manage your screening.

Items to be monitored at least annually:

1) Neurological exam
2) MRI
3) CBC and Metabolic Panel - Bloodwork
4) Cognitive/Behavior assessment
    a) MOCA
    b) Frontal Behavioral Inventory (FBI)
5) If symptoms appear: local neurologist to determine if findings are related to ALSP

*Sisters' Hope Foundation and the ALSP workgroup will update these recommendations as necessary.
